

# Hugo Spångberg

Software developer with a full-stack .NET background and a strong focus on collaboration, quality, and practical problem solving

I am a curious, team-oriented developer based in Växjö. I enjoy working close to the business, understanding the problem before building the solution, and creating software that is reliable, maintainable, and useful in practice.

## Skills

|                        |                                                             |
|------------------------|-------------------------------------------------------------|
| Backend                | C#, .NET, Java, Kotlin, ASP.NET Core, Entity Framework Core |
| Frontend               | HTML, CSS/SCSS, JavaScript, TypeScript, React, Blazor       |
| Databases              | SQL, SQL Server, PostgreSQL, DocumentDB                     |
| Cloud & Infrastructure | Microsoft Azure, AWS, Docker                                |
| DevOps & Tools         | Git (GitHub, Bitbucket), Azure DevOps, CI/CD, Jira          |
| Other                  | Umbraco, Scrum, AI-assisted development                     |

## Work Experience

|                              |                                                                                                                                                                                                                                                                                                                                                                                      |
|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| March 2026 – May 2026        | <b>System Developer</b><br><b>Dasa Control System</b><br>Developed and maintained the company's products and IoT services with a focus on backend .NET and some frontend work. Worked through the full development flow from analysis to testing and implementation, and contributed to improvements in systems, architecture, and working methods.                                  |
| May 2025 – February 2026     | <b>Automation Developer</b><br><b>Södra Skogsägarna</b><br>Automated and improved business processes with RPA and programming (.NET, PowerShell). Identified needs, built solutions, and quality-assured workflows in close collaboration with the business, with a focus on practical value and stable ways of working.                                                             |
| November 2024 – May 2025     | <b>Technical Quality Assurer (LIA)</b><br><b>Visma Enterprise</b><br>Worked with automated testing for the HR-plus payroll system. Built test automation in C#/.NET, worked in a CI environment, and quality-assured functionality and performance. Also developed a GUI for test automation tools and gained experience of product-close quality work in business-critical systems. |
| Summers: 2019–2022           | <b>Deputy Cinema Manager</b><br><b>Filmstaden Växjö AB</b><br>Handled invoicing, scheduling, premieres, and service, while helping create a positive work environment. The role strengthened my sense of responsibility, prioritization, and understanding of day-to-day operations.                                                                                                 |
| October 2012 – November 2024 | <b>Guest Experience Supervisor</b><br><b>Filmstaden Växjö AB</b><br>Responsible for staff, customer experience, recruitment, and training, as well as operational and service quality. Built experience in close collaboration, clear communication, and understanding user and customer needs.                                                                                      |
| January 2011 – November 2012 | <b>Warehouse Worker</b><br><b>Pacson</b><br>Picked and packed orders and made sure deliveries left on time.                                                                                                                                                                                                                                                                          |

## Projects

|                          |                                                                                                                                                                                                                                                                                                                                                              |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Ongoing personal project | <b>Home AI Station &amp; Personal Automation</b><br>Building a Linux-based home AI environment for running local AI models and agents. Developing automations that simplify recurring everyday tasks, with a focus on practical usefulness, privacy, and human control.<br>Technologies: Linux, Docker, Ollama, local language models, AI agents, automation |

## Internships

---

March 2021 – June 2021    **Graphic Designer**  
Karlskrona Municipality  
Created engaging GIFs of Fredric Henric af Chapman to help engage school students ahead of an anniversary year.

February 2021 – March 2021    **Graphic Designer**  
Gagnat  
Worked in a team to produce a 1-minute video presenting the company's business to new clients.

## Languages & Other

---

**Swedish and English**    Fluent in speaking and writing

**Driving licence**    Category B

## Education

---

August 2023 – June 2025    **Web Developer within .NET**  
EC Utbildning  
Knowledge in HTML, CSS/SCSS, JavaScript (frontend/backend), C#, SQL, Azure, ASP.NET, and CMS platforms.

August 2019 – May 2021    **Motion Designer**  
Hyper Island, Karlskrona  
Training in graphic design with a focus on practical client work, team leadership, and design tools.
